

BACHELOR OF SCIENCE IN INFORMATION SYSTEMS
IS 109 – SOFTWARE ENGINEERING
FINAL EXAMINATION

I. MULTIPLE CHOICE: CHOOSE THE CORRECT ANSWER.

1. What does MVC stand for?

- A). Model-View-Controller B). Main-View-Control
C). Model-Version-Control D). Method-View-Class

2. Which Laravel folder contains controller files?

- A). resources/views B). routes
C). app/Http/Controllers D). database/migrations

3. Which Artisan command is used to create a new Laravel project?

- A). php artisan serve B). laravel new example-app
C). composer install Laravel D). php artisan make:project

4. Which file is commonly used to configure database connections in Laravel?

- A). web.php B). config.php
C). .env D). database.php

5. Which route method is used to retrieve data?

- A). post B). put
C). get D). delete

6. What is the main purpose of Eloquent ORM?

- A). Design webpages B). Handle routing
C). Interact with the database using models D). Compile CSS

7. Which command creates a controller in Laravel?

- A). php artisan make:model B). php artisan make:route
C). php artisan make:controller UserController D). php artisan controller:create

8. Which folder contains Blade template files?

- A). resources/views B). app/Models
C). routes D). public/css

9. Which command checks if Composer is installed?

- A). composer -v B). composer version
C). composer -V D). php composer

10. Which Blade directive is used for conditional statements?

- A). @foreach B). @if
C). @include D). @yield

11. Which migration command rolls back the last batch of migrations?

- A). php artisan migrate:fresh B). php artisan migrate:refresh
C). php artisan migrate:rollback D). php artisan migrate:reset

12. Which HTTP method is commonly used for deleting data?

- A). GET B). POST
- C). PUT D). DELETE

13. Which command creates both a model and migration file?

- A). php artisan make:model Flight --migration B). php artisan migrate:model
- C). php artisan create:model D). php artisan model:migration

14. Which Laravel feature is compared to version control for databases?

- A). Seeder B). Blade
- C). Migration D). Routing

15. Which command runs all database seeders?

- A). php artisan seed B). php artisan db:seed
- C). php artisan migrate:seed D). php artisan seed:run

16. Which method retrieves all records using Eloquent?

- A). Flight::find() B). Flight::where()
- C). Flight::all() D). Flight::getOne()

17. Which command removes all tables and reruns migrations?

- A). php artisan migrate:fresh B). php artisan migrate
- C). php artisan migrate:rollback D). php artisan migrate:status

18. Which query builder method is used to insert data?

- A). save() B). create()
- C). insert() D). update()

19. Which of the following is responsible for handling layout and display in MVC?

- A). Controller B). Model
- C). View D). Route

20. Which command checks the installed PHP version?

- A). php -v B). php -version
- C). php -v D). php version

Test II – Identification: Identify the correct answer.

21. It is a PHP MVC web-development framework. - **Laravel**
22. It manages data and business logic in MVC. - **Model**
23. It handles layout and display in MVC. - **View**
24. It routes commands to the model and view. - **Controller**
25. The Laravel file used for database configuration. - **.env**
26. The folder where routes are commonly defined. - **routes**
27. Laravel's ORM for database interaction. - **Eloquent**
28. The template engine used in Laravel. - **Blade**
29. The command used to create migration files. - **php artisan make:migration**
30. The directory where seeders are stored. - **database/seeds**

Test III - Code Problem Solving: Write or analyze the Laravel/PHP code. 4pts each.

1. Write the artisan command on creating a controller named ProductController with resource.
2. Write the artisan command on creating a model named Product with migration.
3. Write the artisan command on running all migrations.
4. Write the artisan command on roll back into the last migration batch.
5. Write the artisan command on seed all database seeders.

Answer:

1. **php artisan make:controller ProductController**
2. **php artisan make:model Product --migration**
3. **php artisan make:migration**
4. **php artisan migrate:rollback**
5. **php artisan db:seed**
