

BACHELOR OF SCIENCE IN INFORMATION SYSTEMS

CC 104 – INFORMATION MANAGEMENT

FINAL EXAMINATION

I. MULTIPLE CHOICE: ENCIRCLE THE LETTER OF THE CORRECT ANSWER.

1. What is the purpose of the CREATE DATABASE statement?

- A). To delete a database **B). To create a new database**
C). To update a database D). To display a database

2. Which of the following is the correct syntax for creating a database?

- A). CREATE DATABASE databasename;** B). MAKE DATABASE databasename;
C). CREATE DB databasename; D). NEW DATABASE databasename;

3. What does the DROP DATABASE statement do?

- A). Displays records B). Updates a database
C). Deletes a database D). Creates a table

4. Which statement is used to create a new table?

- A). ADD TABLE **B). CREATE TABLE**
C). MAKE TABLE D). NEW TABLE

5. What must each column in a table have?

- A). A constraint only B). Only a name
C). Only a datatype **D). A name and a datatype**

6. Which data type is used to store variable-length text?

- A). VARCHAR** B). INT
C). TIMESTAMP D). DATE

7. Which data type is used to store whole numbers?

- A). TEXT B). DATE
C). INT D). VARCHAR

8. What is the format of the DATE data type in MySQL?

- A). YYYY-DD-MM B). DD-MM-YYYY
C). YYYY-MM-DD D). MM-DD-YYYY

9. Which data type stores large amounts of text up to 65,535 bytes?

- A). INT **B). TEXT**
C). DATE D). VARCHAR

10. What does the DECIMAL data type represent?

- A). Fixed-point numbers** B). Dates only

C). Characters only D). Whole numbers only

11. What will the TRUNCATE TABLE statement do?

A). Delete the table structure B). Rename the table

C). Add a column **D). Delete all data inside the table**

12. Which statement is used to delete a table?

A). DROP TABLE B). CLEAR TABLE

C). DELETE TABLE D). REMOVE TABLE

13. What is the purpose of ALTER TABLE?

A). Insert records **B). Modify an existing table**

C). Delete a database D). Create a database

14. Which command adds a new column to a table?

A). INSERT COLUMN B). MODIFY COLUMN

C). ALTER TABLE ADD D). CREATE COLUMN

15. Which constraint ensures that a column cannot have NULL values?

A). DEFAULT **B). NOT NULL**

C). UNIQUE D). PRIMARY KEY

16. Which constraint uniquely identifies each row in a table?

A). UNIQUE B). DEFAULT

C). FOREIGN KEY **D). PRIMARY KEY**

17. Which SQL statement is used to insert new data into a table?

A). PUT INTO B). NEW RECORD

C). ADD INTO **D). INSERT INTO**

18. Which SQL statement is used to update existing records?

A). UPDATE B). EDIT

C). CHANGE D). MODIFY

19. Which SQL statement is used to delete records from a table?

A). DELETE B). CLEAR

C). ERASE D). REMOVE

20. What happens when you use CREATE TABLE with SELECT?

A). Updates a table **B). Copies structure and data from another table**

C). Renames a table D). Deletes a table

II. PROVIDE THE QUERY FOR EACH TASKS BELOW. 10PTS EACH.

tbl_students			
student_id	first_name	last_name	course_id
1	John	Doe	101
2	Jane	Smith	102
3	Mark	Lee	104
4	Emma	Davis	NULL
5	Alex	Brown	102

tbl_courses		
course_id	course_name	instructor_id
101	Computer Science	11
102	Information Systems	12
104	Data Analytics	13

tbl_instructors	
instructor_id	instructor_name
11	Mr. Johnson
12	Ms. Garcia
13	Dr. Patel
14	Mr. Cruz

1. Using **INNER JOIN** Show all students along with their enrolled course names.
Expected Columns Output: **student_id, first_name, last_name, course_name.**

```
SELECT student_id, first_name, last_name, course_name FROM tbl_students
INNER JOIN tbl_courses ON tbl_students.course_id = tbl_courses.id;
```

2. Using **LEFT JOIN** Display all students and their courses. If a student is not enrolled in any course, show NULL for the course name.
Expected Columns Output: **first_name, last_name, course_name.**

```
SELECT first_name, last_name, course_name FROM tbl_students
LEFT JOIN tbl_courses ON tbl_students.course_id = tbl_courses.id;
```

3. Using **RIGHT JOIN** Display all courses and the students enrolled in them. Include courses that have no students.
Expected Columns Output: **course_name, first_name, last_name.**

```
SELECT course_name, first_name, last_name FROM tbl_courses
RIGHT JOIN tbl_students ON tbl_courses.id = tbl_students.course_id;
```
